

Autodesk Awards KarelCAD National Accreditation

KarelCAD has been now accredited by Autodesk to service the Queensland and South Australian manufacturing market place with the Autodesk Mechanical and digital prototyping range of products and consulting services.

Paul Laycock the CEO of KarelCAD made the following comments " This growth through Autodesk has followed the team's success in providing these solutions into the Victorian and Western Australian markets for the past 2 years. The KarelCAD team works with companies across all sectors of the manufacturing industry including Atherton Stainless Steel, Amcor packaging, Fyfe Engineering, Vibroflow mining equipment, Ausplow Farming, IDEAS* recycling and V8 supercar team Kelly Racing to name a few."

"With Brisbane being our Head office it makes a lot of sense for the Queensland market place to have access to such strong resources that have enabled us to become and maintain being the largest Autodesk partner in Australia for so many years. Our South Australian operation has been growing and with our move to bigger offices this addition to our product offering will give our clients a greater chance to get the best service and support available."

"The company's expansion into the Mechanical engineering space has been exciting and challenging and has enabled us to build as a part of our team some great resources. We now have a team of industry based integrators that include Simon Holt (Manufacturing) Ex Triple Eight Racing, Adam Sheather (Structural & MEP) annual presenter at Autodesk University and Geoff Thew (BIM & Services) Ex-Steensen Varming Australia. This team along with our national technical specialist can offer our clients the best support across all industries Australia-wide.

"Autodesk has also awarded KarelCAD the AEC solutions for Western Australia concluding that we are completely National for this range of products which will continue to help us provide strong support for clients and to continue to grow our technical resource base to grow our support and WISE network."

Autodesk has now provided clients in all markets a choice of supplier instead of being faced with having to work with only one Autodesk Partner. KarelCAD has been given this opportunity with years of experience and ability to provide the best solutions, training and support in Australia.

The Autodesk manufacturing solutions including Autodesk® Inventor® , Autodesk® Vault, Autodesk® Showcase®, Autodesk® Alias®, AutoCAD® Mechanical, AutoCAD® Electrical and Autodesk® Moldflow® have all seen a sharp increase in productivity due to both improvements in the software and also increased training of designers through the ATC training systems through KarelCAD.

"I would like to take this opportunity to thank our clients who have continually showed support to our business to enable us to become not only highly recognised in Australia but all over the world. This has been such a great journey and there is just so much more distance to travel."
